

CLAIMS

No amendments to the claims have been made.

1. (Previously Presented) A combination tag, comprising:
a retroreflective article having an optical article and a reflective layer;
wherein the optical article includes an optical surface, an opposite rear surface, and a structured surface coextensive with one of the optical surface and the rear surface;
wherein the reflective layer comprises a metallized ink deposited on at least a portion of the structured surface of the optical article;
a radio frequency-responsive element including an antenna and an integrated circuit, the radio frequency-responsive element having information storage and transmission capabilities adapted to enable an interrogation system to obtain information from the radio frequency-responsive element; and
wherein the radio frequency-responsive element is coupled to one of the optical surface or rear surface of the retroreflective article.
2. (Previously Presented) The combination tag of claim 1 wherein the metallized ink includes a polymer carrier and non-contiguous metal particles.
3. (Cancelled)
4. (Previously Presented) The combination tag of claim 2 wherein the metallized ink has a metal content of about 10% to 14% by volume.
5. (Previously Presented) The combination tag of claim 2 wherein the metal is silver.
6. (Original) The combination tag of claim 1 wherein the optical article includes glass microspheres embedded in a spacing resin, and wherein the optical surface and rear surface are formed from the spacing resin.

amend = 2/2/04

235/494 G06K 19/06

F.d. = 12/19/01

7. (Original) The combination tag of claim 6 wherein the reflective layer is deposited directly on at least portions of the spacing resin.

8. (Original) The combination tag of claim 1, and further comprising security indicia disposed on the optical article.

9. (Previously Presented) A combination tag, comprising:
a retroreflective article having an optical article and a reflective layer;
wherein the optical article includes optical elements comprising microspheres embedded in a spacing resin, the optical article having an optical surface and an opposite structured rear surface formed from the spacing resin; and
wherein the reflective layer is a non contiguous metallized layer deposited on at least a portion of the structured rear surface of the optical article; and
a radio frequency-responsive element coupled to the rear surface of the article, the radio frequency-responsive element including an antenna and an integrated circuit, the radio frequency-responsive element having information storage and transmission capabilities adapted to enable an interrogation system to obtain information from the radio frequency-responsive element.

10. (Previously Presented) The combination tag of claim 9 wherein the reflective layer includes a metallized ink deposited on at least a portion of the structured rear surface of the optical article.

11. (Previously Presented) The combination tag of claim 10 wherein the metallized ink includes a polymer carrier and non-contiguous metal particles.

12. (Previously Presented) The combination tag of claim 11 wherein the metallized ink has a metal content of about 10% to 14% by volume.
